

*. Library Management System

*. My Project is library management system. In which we try to automate the entire process keeping in the view of data integration Approach.

⇒ My Project has four Modules:-

- ① Admin Modules
- ② Student Modules
- ③ Teacher Modules
- ④ Book Modules.

① Admin Module :- In this module admin can be add Student Details, Book Details and Teacher details.
→ Admins can also view the student, Teachers. request and issue the books.

② Student Module :- In this module student can view the available book details and send books request to admin. later admin approve the student request and issue the book.
→ student can return books to admin.

③ Teacher Module :- In this module Teacher can view the available books details and send books request to admin. later admin approve the teacher request and issue the book.
→ Teacher can return books to admin.

④ Book Module :- In which module all books are displayed which are added by admin.

<1> Interviewer:- In which part you worked on.
Ans I worked on frontend part and database part.

<2> Interviewer:- What type of difficulties faced on while developing this project.

Ans I faced some difficulties to integrating all the modules. But, By the help of my Project teacher we our team can handled the issue.

<3> Interviewer:- How many Tables are in your project?

Ans In my project Student Table for student details.
Student request Table for requesting books from admin.

① Teacher Request → Teacher request book from admin.

② Book Table → For book details.

③ Admin Table → For Admin username and password.

④ Teacher Table → For teacher details.
